Return to
Workplace – Playbook

The information provided in this document is provided in good faith based on information available as of the date given, for informational purposes only. No warranties of accuracy or completeness are made, and Dow assumes no obligation or liability for the information presented. This document does not constitute legal advice. Regulatory requirements are subject to change and may differ between various locations. Compliance with all applicable laws and regulations is the sole responsibility of the user.
Guiding Principles

- Compliance and coordination – global and local ownership
- Adherence to external and internal criteria
- Phased implementation
- Individual health and wellbeing
- Clear ongoing communication
Dear Colleague,

As the COVID-19 pandemic enters a new phase, Dow has developed a coordinated plan to safely guide our employees and contractors back to the workplace. Our key principle in this approach is keeping you and your families safe and healthy.

This accompanying playbook is a resource to guide our enterprise-wide return to the workplace. The corporate Crisis Management Team (CMT) will oversee the process while regional CMTs will implement it in a phased approach. This will provide the flexibility to tailor our return to work based on local, country, and regional factors, while still aligning to our Corporate Pandemic Crisis Management Plan. Throughout the process, we will involve key stakeholders, such as site and tenant leadership, regional CMT core functions, unions and work councils (where applicable), local governments, and key industry associations.

This approach factors in that additional COVID-19 outbreaks could reoccur in any geography. As a result, some areas may be escalating their responses while others are de-escalating. Measures may temporarily rise, or be re-introduced, during an overall effort to reach full recovery. This is complex. We must be flexible and proactive to this dynamic, rapidly changing environment.

I am incredibly proud of how well Team Dow has responded to this global pandemic so far. And I know our actions in the next phases will be no different. Our world may have changed quickly, but our ingenuity, agility, resilience, and collaborative spirit did not. We have only grown stronger, together.

Now, we must apply the can-do spirit that kept our operations running, our customers well-served, and our people safe to our return to the workplace. We will build on the lessons we’ve learned from colleagues in Asia, who have already made the transition back to their work sites. And we will incorporate all we’ve learned from our colleagues who have continued to keep our sites running while adhering to all social distancing and other health and safety best practices.

Throughout this process, we must watch out for one another. We must share best practices and key learnings, and adhere to the standards outlined in this return to workplace guide. And we must do all we can to keep ourselves and our loved ones safe and healthy.

Together, we’ll keep moving forward. Together, we’ll remain #DowStrong.

Jim Fitterling
Chairman and Chief Executive Officer
Key Corporate Standards

Return to Workplace Plans will include the following required key corporate standards at a minimum:

- **External and internal criteria required to trigger moving to the next return to workplace phase**
- **Facial coverings required in common areas where social distancing not possible**
- **Global facilities entry process will include required health questions and temperature screening**
- **Proper use of PPE required, including activities that require PPE in addition to facial covering**
- **Disinfecting and hygiene required, especially in common areas such as cafeterias, kitchen areas, break rooms, open office spaces and conference rooms**
- **Body temperature screening required**
- **Social distancing required (min 6ft/1.82m)**
- **Required site policies for contractors and visitors**
- **Number of employees returning with each phase**
- **Communication and training required prior to return to workplace**
- **Maintaining an inclusive culture through our behaviors and actions**

Safety is our number one priority. Please stay focused for your safety and your colleagues’ safety. If you see unsafe behaviors, please intervene and/or report to your supervisor.

Our Approach

#DowStrong
COVID-19 SITE PANDEMIC RESPONSE LEVEL TRIGGER CRITERIA

This document gives specific trigger criteria to escalate in Pandemic Alert Level on a single site. This plan is designed to respond in phases. These phases or alert levels may be applied locally, regionally and corporately in the event of an area-specific threat. The recommended actions at each level assume that levels at the lower levels have been implemented.

The geographic Crisis Management Teams (CMTs) in consultation with Health Services will determine/declare the local alert levels. Corporate CMT needs to be involved in review of the proposal and decision making.

DOW ALERT LEVELS ARE:

<table>
<thead>
<tr>
<th>LEVEL 3</th>
<th>LEVEL 3.5</th>
<th>LEVEL 4</th>
<th>LEVEL 5</th>
<th>LEVEL 6</th>
</tr>
</thead>
<tbody>
<tr>
<td>Heightened awareness and communication. Specific actions are not necessary but prudent company and preplanning and reviews should occur.</td>
<td>Increased communications and advanced preparations. Travel restrictions may be considered. Assemble critical supplies and finalize plans.</td>
<td>Actions are required. Review and implement elements of the plan as appropriate and as the local situation dictates.</td>
<td>Full implementation of the local plans.</td>
<td>Extended duration events. Escalation of response actions needed that could include site shut-down, lock-in, etc.</td>
</tr>
</tbody>
</table>

LEVEL 7

Post-peak period, pandemic waves and recovery. A phased approach to returning to the workplace and actions to monitor and maintain relevant preventive and response measures.
OUR APPROACH

• “Return to workplace” is a coordinated plan to safely bring back employees and contractors to the workplace

• This plan needs to consider numerous country specific, regional and local factors and will be led by the regional CMTs

• The regional CMTs will

  ➤ Assess the return to workplace plan based on a set of recommended external and internal criteria to determine risks, timing and readiness

  ➤ Develop a phased plan based on key principles that ensures compliance and coordination by involving/consulting key stakeholders such as
    - Site leadership
    - Regional CMT core functions
    - Tenant leadership (i-parks/shared bldgs.)
    - Unions and Work Councils where applicable
    - Local government
    - Key industry associations

  ➤ Seek support from the Corp. CMT before implementing the plan and provide regular updates on the status of each site until >90% of the workforce has returned
OUR APPROACH

• “Return to workplace” is a coordinated plan to safely bring back employees and contractors to the workplace

• This plan needs to consider numerous country specific, regional and local factors and will be led by the regional CMTs

• The regional CMTs will
  
  Assess the return to workplace plan based on a set of recommended external and internal criteria to determine risks, timing and readiness
  
  Develop a phased plan based on key principles that ensures compliance and coordination by involving/consulting key stakeholders such as
  - Site leadership
  - Regional CMT core functions
  - Tenant leadership (i-parks/shared bldgs.)
  - Unions and Work Councils where applicable
  - Local government
  - Key industry associations

  Seek support from the Corp. CMT before implementing the plan and provide regular updates on the status of each site until >90% of the workforce has returned

  • Evidence of decreased incidence and distribution of COVID-19 illness within region/district:
    - Virus case doubling rate is greater than 30 days
    - Death rate below 2.5/million/day
    - New Case rate below 40 cases/million/day
    - Current COVID death rate is <10% of peak COVID death rate

  • Government restrictions: Local governments have eased/removed the stay at home orders for non critical-to-operations employees

  • Health system is safely able to: treat all patients requiring hospitalization without resorting to crisis standards of care; test all people with COVID-19 symptoms; conduct active monitoring of confirmed cases and their contacts.

  • Site readiness and mitigation measures:
    - Business conditions support restaging/increasing workforce and regional/local plans exist for phases of increased workforce
    - Elements of facility design and key control measures have been considered including site entry, visitors, space for physical distancing, PPE, facial coverings, shared space (conference rooms, cafeterias, elevators, etc.)
    - Process to manage exceptions is defined (i.e., caregivers, personnel with underlying health conditions, etc.)
    - Individual self-monitoring practices should be implemented

</tbody>
</table>

• The phases can look different in each location based on stakeholder inputs/restrictions
• Each phase will require clarity on who is impacted, what the restrictions are and how to comply
• An exception process must be put in place for employees that are not comfortable with the approach
OUR APPROACH

• “Return to workplace” is a coordinated plan to safely bring back employees and contractors to the workplace

• This plan needs to consider numerous country specific, regional and local factors and will be led by the regional CMTs

• The regional CMTs will
  
  Assess the return to workplace plan based on a set of recommended external and internal criteria to determine risks, timing and readiness

  Develop a phased plan based on key principles that ensure compliance and coordination by involving/consulting key stakeholders such as
  - Site leadership
  - Regional CMT core functions
  - Tenant leadership (i-parks/shared bldgs.)
  - Unions and Work Councils where applicable
  - Local government
  - Key industry associations

  Seek support from the Corp. CMT before implementing the plan and provide regular updates on the status of each site until >90% of the workforce has returned

• Readiness to execute the “Site Infection Control Plan and Case Management” protocol/process
• Efficient and effective processes for site entry; e.g., temperature measurements and/or screening
• Healthy, safe and non-infectious workspaces can be maintained
• Manageable physical spacing and behaviors to accommodate necessary work practices and environments
• Orientation to (new) work environment; mental and emotional process for return and de-escalation
• Process for (business critical) visitors and deliveries

• Self monitoring symptoms and temperatures
• Process for return following COVID-19 diagnosis & recovery
• Exception process and resources for caregivers, childcare, high risk conditions of workforce
• Behavior setting process for encouraging intervention when key controls are not followed
• Travel restrictions

Key control measures in place:
• Physical distancing: Head count, facility design, physical distancing
• PPE & Facial Coverings: face coverings, PPE quantities (e.g., masks, face shields, gloves, gowns)
• Cleaning and hygiene: hygiene practices, disinfecting facility and equipment
• Use of common areas (e.g., elevators, canteens, conference rooms)
OUR APPROACH

• “Return to workplace” is a coordinated plan to safely bring back employees and contractors to the workplace

• This plan needs to consider numerous country specific, regional and local factors and will be led by the regional CMTs

• The regional CMTs will

  - Assess the return to workplace plan based on a set of recommended external and internal criteria to determine risks, timing and readiness
  - Develop a phased plan based on key principles that ensures compliance and coordination by involving/consulting key stakeholders such as
    - Site leadership
    - Regional CMT core functions
    - Tenant leadership (i-parks/shared bldgs.)
    - Unions and Work Councils where applicable
    - Local government
    - Key industry associations

Seek support from the Corp. CMT before implementing the plan and provide regular updates on the status of each site until >90% of the workforce has returned

Regional Plan

- Adhere to the Pandemic Principles outlined in the Corporate Pandemic Crisis Management Plan
- Follow guidelines previously established by the Corporate CMT like space required for physical distancing, facial coverings, temperature screenings, etc.
- Be evaluated on a regular cadence and revised as required (iterative process)
- Ensure parity of expectations & guidelines between office and operations locales
- Ensure a robust communication plan is in place to address key concerns and provides clarity on how we plan to return to the workplace prior to implementing the plan
- Incorporate a tracking system to monitor any rebound in COVID-19 cases

Approval Process

Regional CMTs will determine when a facility is ready and will seek final approval from the Corporate CMT by providing by site:

1. A brief rationale with trigger criteria highlighted and supporting data
2. Confirmation of the plans in place to safely bring workers back in a phased approach
3. Commitment to provide regular progress reports and key challenges and learnings (to be leveraged for other sites)
Site Readiness

#DowStrong
RETURN TO WORKPLACE PLAN

This is intended to provide guidance for regional execution and local implementation. It is intended to be used by all Dow facilities: manufacturing sites, laboratories and office facilities. Once approved to move to level 7, the location will follow the return to workplace phases.

The Return to Workplace Plan:

• Adheres to the Pandemic Principles outlined in the Corporate Pandemic Crisis Management Plan.
• Is a phased approach to de-escalation and recovery, with flexibility to allow for tailored regional/country/local implementation.
• Is risk-based, using data analysis/modeling to determine when to begin and how to progress to mitigate accumulated risk of infection or re-infection on site.
• Is consistent with WHO and US and European CDC guidelines and aligns with local government orders.
• Is used to identify the post-peak pandemic response measures.

Regional CMTs will coordinate the development and implementation of Return to Workplace Plans and will coordinate across regions and with the Corporate CMT.

The following assumptions were used in preparing the Return to Workplace Plan:

• Workers must continue to report any potential signs and symptoms of COVID-19 and stay at home if ill.
• “Hot Spots” of COVID-19 outbreaks may reoccur in any geography. Some areas may be escalating at the same time that others are de-escalating within the region.
• Additional pandemic waves may occur and must be considered in planning.
• Dow will be in the post-peak of pandemic response for an extended duration (months).
• Response measures may temporarily rise or be re-introduced, during an overall effort to reach full recovery.
• Testing methods may not be readily available in the local area. Dow will continue to monitor and evaluate relevant testing methods if/when they become available. Worker self-monitoring and reporting is expected.
• Government restrictions are local and vary widely.
• Sound illness case data may not always be available to support decision-making.
RETURN TO WORKPLACE CHECKLIST

Regional CMTs and Site Leadership Teams/Emergency Operations Center (EOC) should use this workbook to assess their readiness, identify any opportunities and develop Return to Workplace Plans. The Return to Workplace Checklist provides worksheets on a range of topics to ensure readiness for employees and contractors to return to a location for work:

**Trigger Criteria**
- External
- Internal

**Site Readiness**
- Site Leadership Team (and/or EOC)
- Screening/Monitoring
- Communications/Education/Training

**Effective Mitigation**
- Personal Protective Equipment - facial covering guidelines
- Cleaning and Disinfection
- Physical/Social Distancing
- Emergency Services & Security
- Travel Restrictions

**Individual Health and Wellbeing**
- Health Services
- Wellbeing
- Behaviors

**Region- and Site-Specific Considerations**

Find the full Return to Workplace Checklist here.
RETURN TO WORKPLACE HEALTH SERVICES CRITERIA Q&A

Does everyone need to contact Dow Health Services before coming back to their workplace if they have been working from home or off site?

• No, if you have not been ill or had contact with anyone who has been ill in the previous 14 days to your potential return to the workplace, you do not need to contact Health Services. You should however connect with your supervisor/leaders to understand when you may return to your workplace as this will vary by location globally and by government actions.

Who needs to contact Dow Health Services before returning to their workplace?
You MUST call Health Services PRIOR to returning to work* ON SITE if any of the following situations apply:

• Prior to coming back on site from an illness
• Following recent travel
• You have been in close contact with someone who is ill and has symptoms of respiratory illness
• You have been in close contact with someone who has tested positive with COVID-19.
*You may be asked to make an in-person appointment prior to returning on site.

Additional health advice you should follow:

• Do not come to work or Health Services if you are sick.
  Stay home, follow up with your personal healthcare provider then call Health Services.
• If you are at work and become ill, isolate yourself and call ES&S or other contact per your local emergency response protocol for guidance.

• If you are at a higher risk for getting very sick from COVID-19 (older adults, heart disease, diabetes, lung disease) and have concerns about being at work, work with your leader, HR and Health Services if needed.

• If you are a contractor and are ill, stay home. Call your personal health care provider for treatment recommendations and call your company occupational health provider. You must call Health Services prior to returning to work on site.

• If you think you have been exposed to COVID-19 or someone who is ill and has symptoms of respiratory illness, and develop fever and symptoms, such as cough or difficulty breathing, call your healthcare provider for medical advice.

What will Health Services ask or do?

• Health Services will ask regarding your personal history of illness or contact with others who may have been ill.
• If you are ill, you will be asked about your symptoms, when they started and what if any interaction you may have had with your personal health care provider or the local health system.
• You may also be asked about any close contacts (contact tracing) you may have had with others when you were ill or if you have had close contact with others who are ill.
• This information, along with guidance from CDC and WHO, will be used to determine:
  - If you may need to self-quarantine
  - If you need to follow up with your health care provider or local public health organization
  - If you may return to work on site
  - If you test positive for Covid-19
WHAT HAPPENS WHEN SOMEONE IN MY WORK AREA HAS SYMPTOMS OF COVID-19?

Dow has pandemic plans and procedures in place to address workplace illness. These include Site Pandemic Crisis Management Plans, Site Infection Control Plans, etc.

- These are the general guidelines that Dow facilities will follow if an employee appears to have acute respiratory illness symptoms (i.e. cough, shortness of breath) upon arrival to work or becomes sick during the day.

- The standard response for someone ill at work will be followed. This will typically be a call to the site emergency number to engage (ES&S and Health Services).

- The Emergency Medical responders will be wearing appropriate PPE.

- The employee will be isolated from other employees and given a surgical mask to wear. This is to prevent the possible spread of any virus or bacteria.

- Health Services will ask the employee screening questions and determine if further evaluation is necessary. In most cases the employee may be sent home or referred for medical treatment.

- The area where the person worked and had dwelled will be isolated and thoroughly cleaned by trained personnel.

- Individuals who may have had close contact with the employee will be identified, interviewed by Health Services.

- Health Services will make recommendations for monitoring, isolation or quarantine based on the data available.

- Note that entire buildings, floors, or areas will not be evacuated or shut-down.

For critical 24/7 operations locations (i.e. control rooms, staffed data centers, emergency dispatch centers, etc.):

- All of the above steps are applicable, and the critical to operations remaining personnel in the area, will be:
  - Evaluated by a health professional (HS or ES&S) to determine the exposure risk level the employee may have experienced.
  - HS along with Leadership will determine what and if any PPE would be recommended for their personal care during continued operations.
  - Asked to continue to operate while the area is being cleaned.

- The Leader and the Site EOC will determine if it is safe to continue long-term operations, and if so, what additional control room/critical operations area restrictions, protocols, up to and including screening actions which may need to be implemented.

- If you are concerned about your personal health and safety, talk to your supervisor and Dow Health Services.
INSTRUCTIONS HANDLING POTENTIAL COVID-19 CASES FOR PEOPLE LEADERS

This document serves as a guide for people leaders to respond to and manage an employee who reports that they feel ill from COVID-19.

If the employee is at a Dow workplace:

• Have the employee isolate themselves in a separate room.

• Have the employee call the facility Emergency Medical reporting number.

• Notify the Dow Health Services contact: Health Services contact will conduct a screening procedure. Based on the outcome of the conversation, the person may be:
  - Advised to follow-up with their personal healthcare provider or local health department, and be sent home to self-quarantine
  - Sent directly to the local emergency room based on the severity of the symptoms

• Call the Site Leader. The Site Leader will engage/activate the site Emergency Operations Center (EOC) or Site Leadership Team and notify the Responsible Care Leader.

• Contact the local Facilities Management. Facilities Management will ensure the areas where the person has worked will be cleaned and disinfected.

• For confirmed cases only: Site EOC/Leadership Team, the people leader, Public Affairs, and Health Services will draft messaging and communicate the situation to colleagues working in the same area.

• Be sensitive to the employee’s fears about health and that of his/her family or colleagues, about isolation, potential job loss, etc. Be supportive and encourage the employee to use Employee Assistance Program services to discuss concerns. Connect regularly to monitor physical and mental wellbeing.

If the employee works remotely (virtually or home office)
Instruct employee to contact local Dow Health Services, who will follow procedures as outlined above.
EMPLOYEE COMMUNICATIONS CHECKLIST

Given the unique situation of each facility and geographic location, sites will be responsible for site-specific communications to their returning employees. This checklist will provide guidance in developing those communications. The list includes links to existing documents that may be helpful in providing guidance to employees.

- Reinforce facial covering guidelines
- Communicate regularly to employees, contractors and other key stakeholders prior to and after return to workplace has begun at your location. Assess and address employees’ emotional needs in addition to tactical aspects of the return.
- Provide a clearly communicated process for employees to follow when feeling ill at work or at home. See Personal Monitoring For Signs And Symptoms.
- Post posters and signage reinforcing personal hygiene, social distancing, reporting, and other best practices in relevant areas. Find sample posters here.
- Establish orientation plans for employees prior to returning to the workplace.
- Institute plans for ongoing monitoring and identifying concerns for employees upon return to the workplace.
- Communicate availability of EAP and other wellbeing services and information helpful for return to the workplace.
- Remember, we are in this together. Continue to build an inclusive, supportive environment. See Inclusion Moment: COVID-19.
EMPLOYEE RETURN TO WORKPLACE EMAIL CONTENT

Below are suggestions that leaders may choose to include in an email to employees and contractors in advance of returning to the workplace. Providing this information will create a more seamless transition to the workplace. Should an employee have concerns about returning to the workplace, this information also will reduce their stress.

• Reinforce facial covering guidelines
• What to expect when they arrive, e.g., temperature screening requirements and location-supplied facial coverings
• What protections are put in place, e.g., social distancing measures, personal hygiene practices and sanitation protocols
• Location-specific protocols and procedures, e.g., seating in dining areas, kitchen area etiquette, distancing in elevators and stairways, rules for using conferences rooms
• Who to contact with questions. Encourage employees to share concerns and ideas
• The timeline for the majority of employees at a location to return
• This Return to Workplace Playbook as a resource
• A reminder that these protocols and procedures are in place to protect coworkers, their families and their communities by preventing the spread of COVID-19
• If you are feeling ill, please stay home
• A commitment to ongoing communication
• A reminder that worker health and safety is top priority
• Consider the needs of employees not returning to work yet
• #DowStrong
Effective Mitigation of Spread of COVID-19

#DowStrong
FACIAL COVERING REQUIREMENTS

All Dow employees/contractors/guests will be required to wear a facial covering;

- In all common areas
- In any workspace where social distancing guidelines can’t be met (6ft/1.82m)
- If your site/facility requires you to wear facial covering
FACIAL COVERINGS GUIDELINES

The U.S. Centers for Disease Control and Prevention (CDC) continues to study the spread and effects of the novel coronavirus across the United States and on April 3, 2020, issued new recommendations. The new recommendations are that individuals should wear cloth face coverings in public settings where other social distancing measures are difficult to maintain (e.g., grocery stores and pharmacies) especially in areas of significant community-based transmission.

The most effective way to control the spread of the virus and to protect the health of high-risk groups such as senior citizens and those with compromised immune systems is to practice social distancing, frequently and thoroughly wash your hands and avoid touching your face.

The improper use of face masks or facial coverings may create more risk because individuals may not properly clean them, may feel an inflated sense of protection and let their guard down with social distancing practices, handwashing, or may in fact touch their face more frequently as they adjust their mask.

Face Coverings at Work

What is a facial covering?

CDC is advising U.S. citizens use of simple cloth face coverings to slow the spread of the virus and help people who may have the virus and do not know it from transmitting it to others. Cloth face coverings fashioned from household items or made from common materials at low cost can be used as an additional, voluntary public health measure.

Should I wear a facial covering to work?

Dow has implemented several safeguards for its employees, including requiring employees who can work from home to work from home. Sites have procedures in place to promote appropriate social distancing and hygiene practices. If social distancing requirements (6ft/1.82m) can’t be met, facial coverings will be required. In addition, your local site leadership may define additional facial covering requirements above the required minimum guidelines.

Is Dow going to supply me with a facial covering?

Dow will provide facial coverings to employees if social distancing requirement (6ft/1.82m) can’t be met. The CDC guidance is that individuals should wear cloth face coverings in public settings where other social distancing measures are difficult to maintain (e.g., grocery stores and pharmacies) especially in areas of significant community-based transmission.
Guidelines for facial coverings at Dow:
The CDC has posted detailed instructions on how you can make a facial covering, as well as information on how to properly position and clean the facial covering, on its website. Facial coverings should follow these guidelines.

When wearing a facial covering at work the face covering must NOT:

• Interfere with PPE required for your task
• Negatively affect work environment or your or your co-worker’s safety (i.e. a scarf that could tangle in machinery)
• Be worn when directly interacting with the process where there is increased potential for chemical exposure, for example line equipment opening
• Display any inappropriate graphics or language

Can I use a facial covering if I bring my own?
Yes, you can, and you can find information on how to make your own facial covering here. Dow is also working to provide materials to the sites for facial coverings.

Note a facial covering does not take place of practicing proper hygiene. Hygiene practices listed below are still the best way to prevent the spread of the virus:

• Maintain social distancing
• Clean your hands often with soap and water
• Use hand sanitizer
• Avoid touching your face
• Use tissues to cover your mouth if you sneeze or cough, then dispose of the tissue in a designated trash receptacle
• If you cough or sneeze, and don’t have a tissue, cover your mouth with the inside of your elbow
• Avoid close contact with people who are sick
• If you are sick or suspect you may be sick, stay at home and contact your medical professional for further guidance

Find a guide to different types of facial coverings, here.
USE OF FACIAL COVERINGS AND MASKS GUIDE

This is a guide for Dow sites to manage their stocks of face masks for response to pandemic-related health issues. It also provides protocol for ES&S Response when interacting with potentially infectious persons. Please note, this guide is not intended for those sites where use of masks is required by law. Types of masks defined and discussed include:

- Cloth Facial Covering
- Surgical/Medical Face Mask
- N95, FFP2, or equivalent respirator
- Air-Purifying Respirators (APR)
- Firefighter Full Face Mask

The guide covers the following topics in detail:

- U.S. Centers for Disease Control (CDC) Guidance for Dow Employees and Contractors and Dow’s policies
- Cloth facial covering tips
- CDC guidance for EMS crews, including PPE recommendations for the care of patients with known or suspected COVID-19
- Instruction for surgical/medical masks, including a link to a series of WHO posters on how to put on, take off and dispose of masks
- CDC Guidance on mask use for Dow Health Services Staff
- N95 re-use/extended use guidance
- Mask inventory guidance
BODY TEMPERATURE SCREENING GUIDANCE

This document serves as a guide for ES&S and/or other frontline personnel to implement body temperature screening of personnel coming into the site when needed during an escalation of Dow Pandemic Alert Levels. This may be implemented under the direction of and in consultation with a Dow physician and Health Services. The full guidance contains:

- Definitions of different screening devices
- Monitoring equipment
- IR devices not to be used for body temperature
- Locations and conditions for screening areas
- Poster to display at screening area
- Body temperature screening
- Bus or mass transit screening
- Mass infrared screening instructions
- Examples of good practices at other sites

Find the Temperature Screening Poster here.
CONTACT TRACING

When an employee has been identified as being ill with COVID-19 or COVID-19 like symptoms, Health Services will conduct a screening procedure based on CDC recommendations to identify any close contacts that may be at risk of being infected; this will include interviewing people who could have been in contact with the ill individual based on social distancing rules, activities and the symptoms of the patient (coughing, sneezing, etc.).
SOCIAL DISTANCING IN DOW OPERATIONS

Social distancing, also called “physical distancing,” means keeping space between yourself and other people outside of your home. To practice social or physical distancing:
- Stay at least 6 feet (1.82 meters) from other people
- Do not gather in groups
- Stay out of crowded places and avoid mass gatherings

COVID-19 spreads mainly among people who are in close contact (within about 6 feet). Transmission happens when an infected person coughs, sneezes, or talks, and droplets from their mouth or nose are launched into the air and come into contact with people nearby - typically entering through the mouth or nose. The droplets can also be inhaled into the lungs. Recent studies indicate that people who are infected but do not have symptoms likely also play a role in the spread of COVID-19.

Dow manufacturing locations are finding creative ways to maintain social distancing while managing everyday work activities such as sign-in boards/books, shift relief, permitting, lunch and break rooms, and more.

Social distancing can be reinforced as part of field observations (e.g., BBP). Some things to look for:
- Is social distancing maintained between workers in the field?
- Are practices for social distancing being followed within the permit office, control room, office areas and the lab?
- If PPE (e.g., acid suit, arc flash suit) or hand tools must be shared between workers, how are tools and PPE cleaned and disinfected after each person's use?
- Is social distancing maintained and are practices in place to minimize high-touch surfaces at drinking water stations, break rooms, etc.? Are hand-washing facilities available nearby?

Question prompts for social distancing can be included in pre-task analysis:
- In cases where social distance cannot be maintained, can the job/task be delayed?
- Are there alternative ways to complete a job in order to maintain social distancing?
- What are the added layers of protection that can be put in place to safely perform work where minimum social distance cannot be maintained? Examples: Use of barriers, additional PPE and specific behaviors to minimize close contact.

Finally, social distancing is key to protecting our physical health during the pandemic. However, the physical separation hasn’t stopped our Dow teams from finding novel ways to maintain personal connections and work group engagement which are vital to supporting one another’s emotional health and demonstrating that together we are #DowStrong.
SOCIAL DISTANCING IN DIFFERENT SPACES

Following social distancing guidelines will vary space by space. Traditional cubicles already provide a six-foot (1.82m) distance between coworkers, while compressed cubicles should be selected by staggering to maintain six feet (1.82m) of distance between coworkers. Dining and break areas present their own challenges. Consider staggered start/stop times for lunch breaks. Buffet style and self-serve food options may need to be suspended. Chairs should be spaced out to encourage distancing. Water refill stations and drinking fountains should be used to fill personal containers only. Establish procedures for community coffee areas. Staggered seating will need to be available for conference rooms.

Work teams should challenge themselves on how the job/task can be performed SAFELY while following COVID-19 social distancing six foot (1.82 meters) precautions. Here are questions you can ask to do your job AND follow six foot (1.82m) distancing guidelines.

Find the Job/Task Evaluation for Close Contact Work here.

All Dow employees/contractors/guests will be required to wear a facial covering:

- In all common areas
- In any workspace where social distancing guidelines can’t be met (6ft/1.82m)
- If your site/facility requires you to wear facial covering
GLOBAL DOW OCCUPATIONAL HEALTH RECOMMENDATIONS ON COVID-19 VACCINATION

Safe and effective vaccines will play a role in the fight against COVID-19.

Dow’s support for the use of any COVID-19 vaccine for Dow employees will follow the recommendations of leading public health authorities.

What is a vaccine and how does it work?

A vaccine is a substance that helps protect against certain diseases. Vaccines contain a dead or weakened version of a microbe. It helps your immune system recognize and destroy the living microbe during a future infection. When you are vaccinated, you are given a small amount of a harmless form of the disease-causing agent. Your body then makes antibodies to fight it off. Then, if you encounter the disease again, your body will have the antibodies so you do not get sick. 1

Is vaccination against the COVID-19 virus recommended by Dow Occupational Health?

Dow Occupational Health (OH) is encouraging employees to get vaccinated. Our OH professionals review the safety data included in the scientific data set published by the vaccine manufacturers. The more people in a community who are vaccinated, the more likely herd immunity will be reached. This means that even if a person spreads the disease, there are fewer people who will get sick from it. This will eventually stop the spread of the virus.

Vaccines are becoming widely available to everyone at no cost. In order to protect yourself and prevent the spread, it’s recommended that you get vaccinated at your earliest opportunity. Dow encourages employees to get the COVID-19 vaccination and will provide paid time off, use of sick leave or other designated COVID-19 time off for employees to do so. Please work with your leader to coordinate your time off accordingly.

Will vaccination against COVID-19 be mandatory?

Vaccination against COVID-19 will be a personal choice at Dow. Vaccination will not be needed to return to the workplace for those who work from home. Vaccination does not mean that an individual will be able to return to the workplace earlier than permitted by the regional / site Return to Workplace plans and local public health and legislative authorities.
Guidance for getting your COVID-19 vaccine

Everyone (whether a retiree, employee, contractor and/or especially someone with an “at-risk health condition”) is encouraged to get the vaccine when it is made available in your community and not wait for Dow to communicate or offer on-site vaccinations. Governments are purchasing approved COVID-19 vaccines and are providing them to their populations for free. Check your local, state, provincial health department/health ministry web site for updates on how to schedule your vaccine and when you are eligible.

If you have an “at-risk health condition,” you should contact your personal care provider to inform them you have an interest in obtaining the vaccine.

Further, you should pay special attention to local external health sources regarding the availability and access to the COVID-19 vaccine. At this point, your Dow leader will not have any additional information other than what is being provided in this communication. Any updated information regarding COVID-19 vaccinations will be communicated immediately to all Dow employees.

For your safety, COVID-19 vaccines are not licensed to be sold on the open market at this time. Any vaccine offered to you for sale may be a counterfeit. It is possible, however, that facilities will charge a vaccine administration fee. Stay abreast of official communications (from governments, insurance companies, health departments, etc.) to avoid becoming a victim of fraudulent practices.

Do I need to update Dow OH after receiving the vaccine?

Do you have COVID-like symptoms AND have you had the COVID-19 vaccine administered in the last 72 hours?

1. Be prepared to present a card to security that documents the date the vaccine was administered.

2. As long as you do not have other COVID-19 symptoms such as cough, loss of taste or smell or GI symptoms (which are not associated with vaccines), access will be granted.

Dow is pleased to hear that more employees and/or contractors are getting vaccinated. A normal reaction in the immediate days post-vaccination may include symptoms which may be confused with those of COVID-19 such as fever, headache, and muscle aches. ALL employees continue to be subject to temperature screening and replying to the COVID-19 screening questions. If you have a fever and/or other post-vaccination symptoms (but no COVID symptoms such as cough, loss of taste or smell or GI symptoms) AND you have been vaccinated within the last 72 hours, be prepared to present your vaccination card as evidence so you can be granted access to the site.
Will the vaccine impact my ability to work?
It is normal to have some minor symptoms at the site of the injection or feel fatigue, headache or some muscle ache or, less likely, some fever. This is normal and expected and is your way for your body to respond and create an immune response. These symptoms occur and last up to one or two days following the vaccination. They are not a reason to decline the second dose of the vaccine. The symptoms respond well to over-the-counter pain medication and should not prevent you from working.

Will I be able to stop wearing a mask and other protective measures as soon as I am vaccinated?
Vaccination is just one of the many tools to help us achieve lower numbers of community transmission.

Vaccinated employees will need to continue to follow Dow standards as directed by the regional CMTs based on local transmission in the community. When vaccines become available, there will still be a need to continue basic mitigation measures (e.g., mask wearing, physical distancing and limiting occupancy in indoor spaces, quarantine, strict handwashing, surface hygiene, etc.) to prevent transmission. At this time, it is assumed that even vaccinated people can continue to carry the virus.

Will the vaccination alter Return to the Workplace plans?
Return to the Workplace plans will continue to follow the criteria highlighted in our Return to Workplace Playbook. The more people in the community are vaccinated and new cases in communities are dropping and staying low, the more likely we will experience less government restrictions.

Am I automatically approved to travel if I have been vaccinated?
No, you must follow all current travel restrictions, testing, quarantine and public health protocols for international and domestic travel even if you have received the COVID-19 vaccination. We anticipate that rules (such as quarantine, COVID-testing) will be waived when there is scientific evidence that vaccination not just protects you from disease but also from being infected and transmitting the virus to others.

Individual Health and Wellbeing

#DowStrong
INCLUSION AND COVID-19

What does inclusion have to do with COVID-19?

I: Be intentional with information. Refer to official sources and do not be consumed by inaccurate updates born out of fear or panic.

N: Intervene when you see non-inclusive behaviors.

C: Acknowledge commonalities in this crisis. We need to stand together in solidarity in times like this.

L: Listen and respect different perspectives. Be assertive with your feelings of discomfort or anxiety should the topic be too uncomfortable for you.

U: Watch for unconscious biases, such as referring to the novel coronavirus as Wuhan or China virus.

S: Ask for support if this situation is causing you fear or anxiety or is hindering your daily function.

I: Be patient with inconveniences that are in place as a part of the precautionary measures such as temperature taking, reporting travel or working remotely.

O: Provide options to support flexible work arrangements or arrange for back ups for work that must be completed on site.

N: Acquire the appropriate amount of necessities as and when required. Do not hoard. Hoarding would deprive others who may need them more urgently.

Demonstrating inclusive behaviors to keep ourselves, our families and our communities safe
EMPLOYEE WELLBEING

COVID-19 has impacted all of us in different ways. It is important to acknowledge uncertainty, change and the consequences of this pandemic. As a Dow employee, you have access to support to help you navigate through these uncertain times, from paid leave and flexible work arrangements to legal advice and supported loans. To help with your overall wellbeing, we have also included tips, information and resources to assist all employees and leaders.

We will continue to monitor needs and update this section with the latest best practices and accessible materials.

Return to Workplace Playbook
**ISOLATING AT HOME**

*If you have COVID-19*

- If you or a family member becomes ill with these symptoms:  
  - Fever higher than 38°C / 100°F AND/OR  
  - Sudden congestion or trouble breathing AND/OR  
  - Cough AND  
  - Has had close contact with someone who has tested positive for COVID-19

- If you or a family member becomes ill within the past 7-14 days with these symptoms:  
  - Fever higher than 38°C / 100°F AND/OR  
  - Sudden congestion or trouble breathing AND/OR  
  - Cough AND  
  - Has had close contact with someone who has tested positive for COVID-19

- If you or a family member have not traveled internationally in the past 14 days or close contact* with a person with COVID-19 symptoms in the past 14 days:  
  - Fever higher than 38°C / 100°F AND/OR  
  - Sudden congestion or trouble breathing AND/OR  
  - Cough AND  
  - Has had close contact with someone who has tested positive for COVID-19

*Note for close contact from other worksheet:*

1. DO NOT COME TO WORK
2. Notify your supervisor or host.
3. Visit your local public health website for more information on COVID-19 and when to contact your healthcare provider or public health authority.

*IF YOU ARE ALREADY AT WORK:

- Do NOT leave work area.
- Notify your supervisor or host.
- DO NOT COME TO WORK.
- DO NOT COME TO WORK.

**SELF-ISOLATING**

*Because you are a close contact and/or have traveled internationally in the past 14 days*

2. Notify your supervisor or host.
3. Visit your local public health website for more information on COVID-19 and when to contact your healthcare provider or public health authority.

**SELF-MONITORING**

*To reduce the spread of COVID-19*

- Monitor your symptoms as instructed by your healthcare provider or public health authority.
- If your symptoms grow worse, contact your healthcare provider or public health authority.
- Avoid contact with pets if you live with individuals who have compromised immune systems.
- Separate yourself from others as soon as you have symptoms of COVID-19.
- Avoid contact with sick people or animals, or travel to Novel Coronavirus affected areas.
- DO NOT COME TO WORK.

- If you or a family member becomes ill with these symptoms:  
  - Fever higher than 38°C / 100°F AND/OR  
  - Sudden congestion or trouble breathing AND/OR  
  - Cough AND  
  - Has had close contact with someone who has tested positive for COVID-19

- If you or a family member becomes ill within the past 7-14 days with these symptoms:  
  - Fever higher than 38°C / 100°F AND/OR  
  - Sudden congestion or trouble breathing AND/OR  
  - Cough AND  
  - Has had close contact with someone who has tested positive for COVID-19

- If you or a family member have not traveled internationally in the past 14 days or close contact* with a person with COVID-19 symptoms in the past 14 days:  
  - Fever higher than 38°C / 100°F AND/OR  
  - Sudden congestion or trouble breathing AND/OR  
  - Cough AND  
  - Has had close contact with someone who has tested positive for COVID-19

**TEMPERATURE SCREENING IN PROGRESS**

*To reduce the spread of COVID-19 in the workplace, Dow has instituted temperature screening.*

1. If your temperature is higher than 38°C / 100°F, DO NOT COME TO WORK and contact your local Health Services contact and ask for further guidance.

- If you or a family member becomes ill with these symptoms:  
  - Fever higher than 38°C / 100°F AND/OR  
  - Sudden congestion or trouble breathing AND/OR  
  - Cough AND  
  - Has had close contact with someone who has tested positive for COVID-19

- If you or a family member become ill within the past 7-14 days with these symptoms:  
  - Fever higher than 38°C / 100°F AND/OR  
  - Sudden congestion or trouble breathing AND/OR  
  - Cough AND  
  - Has had close contact with someone who has tested positive for COVID-19

**STAY AT HOME**

*If you have flu-like symptoms*

- If you have flu-like symptoms:
  - DO NOT COME TO WORK
  - Notify your supervisor or host
  - Sudden, severe or persisting cough
  - Fever higher than 38°C / 100°F
  - Sudden, severe or persisting muscle aches
  - Headache
  - Runny nose
  - Sore throat
  - Gastrointestinal symptoms such as diarrhea
  - Shortness of breath
  - DO NOT COME TO WORK
  - Notify your supervisor or host
  - Sudden, severe or persisting cough
  - Fever higher than 38°C / 100°F
  - Sudden, severe or persisting muscle aches
  - Headache
  - Runny nose
  - Sore throat
  - Gastrointestinal symptoms such as diarrhea
  - Shortness of breath

**DO YOUR PART TO HELP PREVENT THE SPREAD OF COVID-19!**

- Do your part to help prevent the spread of COVID-19!
- Wash your hands often (at least 20 seconds).
- Avoid touching your eyes, nose or mouth.
- Keep at least 6 feet (1.82 meters) between yourself and others.
- Maintain at least 6 feet (1.82 meters) between yourself and others.
- Avoid contact with pets if you live with individuals who have compromised immune systems.
- Maintain good hygiene practices (e.g., hand washing, being healthy, eating well).
- Monitor your symptoms as instructed by your healthcare provider or public health authority.
- Visit your local public health website for more information on COVID-19 and when to contact your healthcare provider or public health authority.
- DO NOT COME TO WORK.

## Top Nine Social Distancing List

This list contains items to look for when completing a field assessment on Social Distancing. If you find unacceptable behaviors or conditions; intervene as necessary. Upon completion, communicate findings to the FWGL if needed.

<tbody>
<tr>
<td>1</td>
<td>Have you observed workers within 6 feet (1.82m) of each other? If a task requires people to work within 6 feet (1.82m) of each other, are they taking appropriate precautions (ex. wearing face shields)?</td>
</tr>
<tr>
<td>2</td>
<td>Are workers observed sharing hand tools in the field? If so, are they getting cleaned/disinfected?</td>
</tr>
<tr>
<td>3</td>
<td>Are workers observed touching their faces? If so, are they washing their hands before and/or after?</td>
</tr>
</tbody>
</table>
| 4 | Is PPE getting shared amongst the work crew / shifts? If so, is it getting adequately cleaned and/or disinfected following each use? Ask.  
**Body Suits:** Acid / ARC Flash / Aluminized Suits require professional cleaning before swapping amongst workers or workers should wear Tyvek suits underneath to minimize direct contact.  
**Respiratory Protective Equipment (RPE):** Cleaning and disinfecting are required for RPE that are shared amongst employees before swapping. Whenever possible, sharing respirators should be discontinued. |
| 5 | Are workers observed in close proximity to each other in vehicles? Are they using open air methods where possible?  
**Vehicles:** Should be no more than 2 passengers per vehicle. No more than 2 in the cab of a truck. Open windows to increase air flow in the cabin. Wipe down/disinfect frequently touched surfaces.  
**Passenger Vans/Buses:** Keep your distance by skipping seats or benches and sitting cater-cornered. Wipe down/disinfect occupied seats after each use. |
| 6 | Are workers observed in close proximity to each other at water coolers/ice chests? Are there hand wash stations near water coolers/ice chests? |
| 7 | Are workers following best practices for social distancing within the permit office/control room? Is there an effort to minimize personnel from entering the control room?  
- Maintain a 6-foot (1.82m) distance from permit issuers and others.  
- One permit receiver in the permit office per work crew. The rest of the work crew remains outdoors/in vehicles/not in permit office.  
- Staying within/behind taped designated areas or behind tables.  
- Prior to entering permit office/control room, are personnel are utilizing outside hand washing stations to disinfect hands. |
| 8 | Are common indoor areas/surfaces getting cleaned/disinfected on a routine basis? Does the facility have a cleaning schedule with assigned areas? |
| 9 | Do you see group gatherings that are greater than 10 people? Are break room/conference room chairs adequately spaced for people to sit 6 feet (1.82m) apart? |
STAY SIX FEET APART JOB/TASK EVALUATION FOR CLOSE CONTACT WORK

Work teams should challenge themselves on how the job/task can be performed SAFELY while following COVID-19 social distancing 6 ft (1.82m) precautions. Consider the following:

☐ Can this job/task be delayed? __________________________

☐ Are there additional steps that can be put in place to achieve the same outcome that will allow for compliance with social distancing 6 ft (1.82m) precautions? __________________________

☐ Are there additional layers of protection that can be applied or performed, before work commences?

☐ Conduct a wellbeing check and temperature screening.
   Note: If any COVID-19 symptoms are present contact Medical. Do not perform the task with the other person.

☐ Limit time of exposure between co-workers. __________________________

☐ Be conscious of where you are facing vs. other workers. __________________________

☐ Safety pre-plan the job and discuss how each person should monitor themselves and what they should do if they feel a cough or a sneeze coming on. __________________________

☐ Could additional PPE be used (goggles, face shields, breathing air, etc.)?
   Note: PPE is the final line of defense for work. We should not use any medical respiratory protection to accomplish the task. __________________________

☐ Are there any other means of accomplishing this work – by adding additional layers of protection? __________________________

If at any time, workers are uncomfortable performing the close contact work, escalate to Supervision.
COVID-19 PPE
FILTERING FACEPIECE RESPIRATORS, SURGICAL MASKS, AND CLOTH FACIAL COVERINGS

N95 Respirators* (also known as “filtering facepiece respirators” and “dust masks”)

• When correctly worn by a person who has been fit tested and trained, and who is clean shaven, a filtering facepiece respirator protects the wearer from breathing virus particles

• If the wearer is infected, a filtering facepiece respirator can also reduce the virus particles expelled by the wearer, reducing transmission risk to others
  - NOTE: Filtering facepiece respirators equipped with an exhalation valve can release more expelled particles than those without the exhalation valve

• Frequently used as respiratory protection for routine plant tasks.

• For pandemic response their use is reserved for healthcare providers and other medical first responders who provide direct patient care

* “N95” refers to a filtration efficiency rating for certified filtering facepiece respirators produced in the United States (NIOSH-42CFR84). Other geographies use similar certification systems with the following ratings
  - FFP2/FFP3 (Europe EN 149-2001)
  - KN95 (China GB2626-2006)
  - P2 (Australia/New Zealand AS/NZA 1716:2012)
  - Korea 1st class (Korea KMOEL - 2017-64)
  - DS (Japan JMHLW-Notification 214, 2018)
COVID-19 PPE
FILTERING FACEPIECE RESPIRATORS, SURGICAL MASKS, AND CLOTH FACIAL COVERINGS

Certified Surgical/Medical Masks*

- Certified Surgical/Medical Masks refer to masks that have been **certified for use by health care providers**
- Unlike filtering facepiece respirators, surgical/medical masks are not “respirators” as they are **not designed to provide effective filtration of inhaled air and the wearer is at risk of breathing virus particles**
- However, if the wearer is infected (either symptomatic or a-symptomatic), a **properly worn mask is effective at reducing virus particles expelled by the wearer**, lowering transmission risk to others
- Certified Surgical/Medical Masks are reserved for:
  - Patients who become ill or exhibit symptoms while at work.
  - Health care providers in non-direct patient care settings, or settings with little risk of infection transmission from the patient

* Examples of certification standards include:
  - ASTM F2100-19 Standard Specification for Performance of Materials Used in Medical Face Masks
  - ANSI/ASQC Standard: ANSI/ASQC Z1.4
  - 2.3 ISO Standard: ISO 2859-1
  - 2.4 European Standard: EN 14683 Medical Face Masks — Requirements and Test Methods
COVID-19 PPE
FILTERING FACEPIECE RESPIRATORS, SURGICAL MASKS, AND CLOTH FACIAL COVERINGS

Non-Certified Surgical/Medical Masks

• Non-certified surgical /medical masks are not “respirators” as they are not designed to provide effective filtration of inhaled air and the wearer is at risk of breathing virus particles
• However, if the wearer is infected (either symptomatic or a-symptomatic), a properly worn non-certified mask can reduce virus particles expelled by the wearer, lowering transmission risk to others
• These masks are not tested and certified against the standards required of masks used in the health care industry
• Therefore the use of non-certified masks does not compete with or deplete the supply of certified masks needed by the health care industry for dealing with COVID-19
• Intended for general plant use where proper social distancing is not possible, and in areas of significant social community-based spread (hot spots)
• Intended as an interim solution until adequate numbers of reusable cloth facial coverings are available
COVID-19 PPE
FILTERING FACEPIECE RESPIRATORS, SURGICAL MASKS, AND CLOTH FACIAL COVERINGS

Cloth Facial Coverings

• “Cloth facial covering” is a generic term describing manufactured and/or home made devices that cover the mouth and nose of the wearer
• Cloth facial coverings are not “respirators” as they are not designed to provide effective filtration of inhaled air and the wearer is at risk of breathing virus particles
• However, if the wearer is infected (either symptomatic or a-symptomatic), a cloth facial covering can reduce virus particles expelled by the wearer, lowering transmission risk to others
• There are no established certification schemes and/or standards for cloth face coverings
• Intended for general plant use where proper social distancing is not possible, and in areas of significant social community-based spread (hot spots)
• CDC has posted detailed instructions on how you can make a facial covering, as well as information on how to properly position
• Cloth facial coverings can be laundered and reused and the CDC has indicated a washing machine should suffice in properly washing a cloth face covering

Examples of homemade cloth face coverings from the CDC web site
