Sampling Period △C *	2.32	μg/m³
Annual Average ΔC **	NA	μg/m³

^{*} Sampling Period ΔC = Difference between the highest and lowest concentrations detected during the sampling period

Rc: Recollection analysis

B: Compound present in field blank (s) greater than 1/3 the compliance limit or measured target analysis

J: Estimated Value - The analyte was detected between the Method Detection Limit and Reporting Limit

NA: Not Applicable

^{**} Annual Average ΔC = The rolling average of the 26 previous 14 day sampling periods. This will be calculated after data from 26 sampling periods are available.

I: Internal Standard recovery outside acceptance limits
